EDUCATION

The Hong Kong University of Science and Technology | Full-time Postgraduate Student, Artificial Intelligence and Entrepreneurship (AIE) Sep 2026 - Present
South China Normal University | Bachelor's Degree, Software Engineering Sep 2022 - Jul 2026
GPA: 3.33

PROJECT EXPERIENCE

Airport Runway Scheduling Optimization Algorithm | Undergraduate Capstone Project 2026

- Designed an ant colony optimization approach that generates an improved aircraft arrival and departure schedule while minimizing total flight delay under runway-count, minimum-separation, and planned-time constraints.
- Built a front-end/back-end workflow in which users enter airport and flight parameters; the front end validates value ranges and compliance before submission.
- Implemented the back-end optimization flow and returned the optimized sequence and scheduling recommendations for display in the web interface.

INTERNSHIP EXPERIENCE

Beijing Yanling Wangwei Intelligent Technology Co., Ltd. | Binary Fuzzing Agent Development Intern Jul 2025 - Sep 2025

- Developed an automated fuzzing agent for binary executables and gained hands-on experience with taint analysis, fuzz testing, and AFL workflows.
- Explored LLM integration across initial test-case generation, seed mutation, result analysis, and report generation to automate the fuzzing workflow.

Guangzhou Wanglv Internet Technology Co., Ltd. | Server Operations Intern Oct 2024 - Dec 2024

- Maintained servers and optimized back-end services, including development of a bastion-host data migration script and support for service debugging.
- Used FastAPI, Nginx, Linux, and shell scripting for service setup and operations, and participated in requirements analysis, code review, and deployment.

TECHNICAL SKILLS

Programming and Data: Python, Java, C, SQL, MySQL; basic assembly reading and programming.
Back End and Operations: FastAPI, Spring Boot, Linux, Nginx, shell scripting.
Web: HTML, CSS, JavaScript, Vue; front-end/back-end integration and input validation.
Algorithms and Security: ant colony optimization, AFL-based fuzzing, and taint analysis.
Languages: Mandarin Chinese (native); English (IELTS 7.0).
