

Resume

Name: Xiaoyu Luo Date of Birth: August 2004 Height: 175 cm
Contact: +86 13631635573/+852 91967880 13310831343@163.com

Education

South China Normal University - Software Engineering - Bachelor's Degree 2022-09
~ 2026-07

The Hong Kong University of Science and Technology - Artificial Intelligence and
Entrepreneurship (AIE) - Full-time Postgraduate Student 2026-09 ~ Present

Academic Performance (South China Normal University): GPA 3.33

Major Courses: Python Programming, Computer Architecture, Object-Oriented Programming, Introduction to Software Engineering, Java Programming, Data Structures and Algorithms, Algorithm Design and Analysis, Operating Systems, Database Systems, Web Development, Linux, Computer Networks, Software System Design, Software Testing, AI Fundamentals, Network Security, Data Mining, Robotics, Software Design, Distributed Systems, Knowledge Representation, Natural Language Processing, Computational Intelligence.

Project Experience

Server Operations (Internship) 2024-10 ~ 2024-12

Completed a one-month internship at Guangzhou Wanglv Internet Technology Co., Ltd., managing servers, optimizing back-end algorithms, and writing bastion-host data migration scripts. Gained experience with Python/FastAPI back-end setup and operations, Nginx proxies, Linux, and scripting. Learned the software project lifecycle from requirements analysis and code review to deployment, while collaborating with colleagues.

Online Collaborative Note-Taking Platform - Back-End Server and Database Setup and Operations 2025-02 ~ 2025-5

Earlier back ends used lightweight FastAPI, which offered limited support for business-layer and database interaction. This project adopted Java Spring Boot, progressing from Java Web fundamentals to enterprise framework development. Used presentation, business, and data layers to receive front-end data, process business logic, and perform CRUD operations on user data.

Binary Fuzzing Agent (Internship) - Full Development 2025-07 ~ 2025-9

Completed a three-month internship at Beijing Yanling Wangwei Intelligent Technology Co., Ltd., developing a binary fuzzing agent. Learned taint analysis and fuzzing for binary executables, then focused on an AFL-based automated agent using LLMs for initial test-case generation, seed mutation,

result analysis, and report generation.

Airport Runway Scheduling Optimization Algorithm Design - Capstone Project

2026-02 ~ 2026-06

Designed an ant-colony-based runway scheduling solution that minimizes total flight delay under constraints including runway count, minimum safety separation, and scheduled takeoff and landing times. In the front-end/back-end architecture, the front end collects and validates airport and flight parameters; the back end runs the optimization and returns the optimized sequence and scheduling recommendations for display.

Skills and Strengths

Computer Skills: Proficient in Python, Java, and C fundamentals; able to read and write basic assembly; experienced with databases and MySQL; trained in Linux operations and scripting; experienced in Web development with HTML, CSS, JavaScript, and Vue; proficient in FastAPI- and Spring-Boot-based back-end architectures.

Teamwork: Strong communication skills and effective working relationships with team members; familiar with task allocation, version control, and collaborative division of work through project experience.

Language Skills: IELTS score of 7.0; able to read English texts without difficulty and communicate confidently in English.

Self-Assessment

Conscientious and responsible, with strong self-learning and problem-solving abilities and no habit of procrastination. Skilled at using online resources and a personal AI-assistant toolchain, with basic video, image, audio, and text editing skills. Value practical application of software engineering skills and hope to gain further hands-on development and industry experience.

My undergraduate studies covered many topics at an introductory level. Through internships, I hope to study project development more deeply, including its high-level logic and underlying principles in areas such as data processing and software development.
