

Applicant: LUO Xiaoyu

Program: MSc Information Technology, The Hong Kong University of Science and Technology

PERSONAL STATEMENT

I am often amazed by an incredibly capable friend. He seems able to access any TV shows he wants, any songs he likes, and even news from all over the world. With his help, I felt the power of information technology for the first time and learned to independently find needed resources in the vast online world. Such experiences sparked a strong fascination in me for the operating mechanisms behind the internet. Later, when I got my first computer, this curiosity grew even stronger. I selected and assembled its components, gained a deep understanding of how hardware units communicate with each other, and began to wonder how operation systems could run efficiently on this hardware. During my undergraduate studies, I worked on various projects, from website building and server operation to function development. These experiences not only improved my practical skills but also helped me clarify the direction in information technology I wanted to explore deeply. Now, as I see technologies like artificial intelligence and smart cars turn my childhood fantasies into reality, I am even more eager to become someone who drives such changes: to shift from a “user” of the digital world to a developer,” and use technology to build digital services that more people can enjoy and rely on.

During my undergraduate years, I started exploring this field. My academic training laid a solid theoretical and practical foundation for further studies in information technology. On one hand, systematic coursework helped me gradually build a comprehensive understanding of information system structures, algorithm logic, and software engineering concepts. Theoretical courses like *Introduction to Software Engineering* and *Algorithm Design and Analysis* developed my ability to understand system architectures and program logic from a macro perspective, providing a clear thinking framework for my later development practice. On the other hand, practical courses such as *Python Programming Foundation* and *Web Application Development* trained me to apply theoretical knowledge to actual projects. Through constant debugging and optimization, I improved my efficiency in code implementation and problem-solving. Beyond coursework, I gained plenty of practical experience in team academic projects. For example, when developing a traffic inquiry system with classmates, I was responsible for frontend development using the Vue framework. Having no prior experience with this framework, I quickly mastered its component-based structure and interaction logic by reading official documents, analyzing open-source code, and using AI tools for support. I successfully completed page design and function implementation. This experience made me realize that the ability to quickly learn new technologies independently and integrate knowledge efficiently is one of the most valuable competitive strengths in the information technology field. For this reason, I built my own GitHub knowledge repository, which systematically records source code, technical notes, and development insights from my personal and team projects. This not only helped me reuse and improve existing experience in subsequent projects but also allowed me to gradually establish my own development system and learning methods through continuous accumulation and reflection.

In a real work environment, my internship experience deepened my understanding of the complexity and collaboration of information technology in real system settings. The one-month server operation and maintenance internship made me fully realize that computer systems are not made of isolated modules but an interconnected, dynamically interacting whole. My main task was to write data backup and automatic update scripts to check if the server had successfully migrated data to a new machine. Initially, I tried to judge the migration status by comparing configuration files, but in practice, I found that backup files would update automatically during migration, making this logical judgment ineffective. After multiple attempts and adjustments, I finally used API queries to check the server’s purchase time and determine if data migration was successful. This process taught me that theoretically optimal solutions often require balancing security, performance, and feasibility, a mindset essential for information system development and maintenance. In a bastion host automatic backup project, I accidentally deleted a configuration file during script debugging due to having high operation permissions. This mistake made me deeply understand the importance of permission management and security control. More importantly, while solving this problem, I learned the troubleshooting mindset. Whenever I encountered an error I could not locate,

senior colleagues would not give me the answer directly. Instead, they guided me to insert log outputs into the script and locate abnormal links step by step, helping me find the root cause independently. Through such practice, I gradually developed systematic analysis and independent troubleshooting abilities, and gained a better understanding of the rigorous logic, systematic thinking, and engineering awareness required in information technology. This experience not only improved my technical literacy but also made me calmer and more organized when facing complex system problems, laying a solid foundation for future professional study and research.

Your university's MSc Information Technology programme aligns closely with my career plan. Aimed at cultivating high-level talents with cutting-edge IT capabilities and systematic thinking, the programme emphasizes students' all-round development in both theoretical analysis and practical innovation. Its curriculum integrates computer science principles with the latest technology applications, and particularly focuses on developing students' ability to solve complex IT problems, exactly the core competency I want to strengthen in my future career. Additionally, the Artificial Intelligence module in the curriculum is especially important to me. The algorithm logic, data processing, and application scenarios of AI are increasingly becoming the core drivers of technological innovation. Studying this module will help me deeply understand the operating mechanisms of intelligent systems and master the ability to integrate AI into practical development, thus enhancing my competitiveness in future intelligent application design.

After completing my master's degree, I hope to enter the information technology or software development field, working on system architecture design or intelligent application development. Within 3–5 years, I aim to grow into a technical engineer or R&D lead who can independently manage large-scale projects, integrate cutting-edge technologies, and optimize system performance.

In summary, your programme will not only allow me to systematically improve my comprehensive abilities in computer science and information technology but also develop the breadth and depth of my thinking in engineering practice and technological innovation. I believe this will provide solid academic support and a practical platform for me to achieve my career goals, enabling me to constantly surpass myself in the rapidly developing information technology field and grow into a truly innovative and influential technical professional.

实习证明

兹有华南师范大学软件工程专业罗霄羽同学，身份证号为 430922200408089613，于 2025 年 7 月 2 日至 2025 年 9 月 30 日在我司进行实习， 其实习岗位是 技术研发部实习生。 该同学在实习期间主要参与了以下工作：

一、协助开发二进制模糊测试 agent 的开发，负责基础业务框架的构建以及模糊测试过程大语言模型的应用。

二、参与 llm 驱动符号化漏洞检测器的开发，辅助进行漏洞信息搜集以及通用大模型解析效率的对比实验。

该同学具备积极的学习态度、良好的团队协作能力，并在专业知识的深化理解、实际操作技能及问题解决能力方面取得显著进步。

特此证明。

Internship Certificate

This is to certify that Mr. LUO Xiaoyu, ID no. 430922200408089613, majoring in Software Engineering at South China Normal University, interned as Technical R&D Intern at our company from July 2, 2025, to September 30, 2025. During the internship, he mainly engaged in the following tasks :

1. Assisted in developing a binary fuzzing test agent, responsible for constructing the foundational business framework and implementing large language model (LLM) applications in the fuzzing process.
2. Contributed to the development of an LLM-driven symbolic vulnerability detector, supporting vulnerability information collection and comparative experiments on parsing efficiency of general-purpose large models.

Mr. LUO demonstrated a proactive learning attitude and strong teamwork skills. Through this internship, he significantly enhanced his technical expertise, practical problem-solving abilities, and operational proficiency.

实习证明

兹有华南师范大学软件工程专业罗霄羽同学，身份证号为 430922200408089613，于 2024 年 10 月 29 日至 2024 年 12 月 12 日在我司进行实习，其实习岗位是：技术研发部实习生。该同学在实习期间主要参与了以下工作：

- 一、协助开发内部坐席管理系统，负责异常处理部分模块的代码编写、测试和优化。
- 二、参与公司内部软件系统的维护和升级，解决了堡垒机服务器自动化漂移脚本及开机自检脚本编写等技术问题。

纵观他实习期间的表现，他能够积极学习新的计算机技术和知识，与团队成员合作良好，展现出较强的学习能力和团队协作精神。通过实习，该同学对计算机专业知识有了更深入的理解和掌握，具备了一定的实际操作能力和问题解决能力。

特此证明。

Internship Certificate

This is to certify that Mr. LUO Xiaoyu, ID no. 430922200408089613, majoring in Software Engineering at South China Normal University, interned as intern at the Technical R&D Department of our company from October 29, 2024 to December 12, 2024. During the internship, he mainly engaged in the following tasks :

1. Assisted in developing the internal agent management system, and underwent the coding, testing, and optimization of the exception handling module.
2. Participated in maintaining and upgrading internal software systems, resolving technical issues including automated drift scripting for JumpServer and startup self-check script development.

Based on his performance, I found that he could take the initiative to learn new computer technologies and knowledge, and cooperated well with team members, demonstrating strong learning ability and teamwork spirit. Through the internship, Mr. LUO Xiaoyu has gained a deeper understanding and mastery of computer-related knowledge, and acquired certain practical operation skills and problem-solving abilities.

Internship Certificate

This is to certify that Mr. LUO Xiaoyu, ID no. 430922200408089613, majoring in Software Engineering at South China Normal University, interned as IT Development Assistant Engineer at our company from July 1, 2024 to August 31, 2024. During the internship, he mainly engaged in the following tasks :

1. Assisted in the development of Configuration quotation system, and took control of writing, testing and optimizing some modules of the code.
2. Participated in the maintenance and upgrade of the company's configuration quotation system, and completed the development of business modules such as gradient management, parameter configuration, and exchange rate management.

Based on his performance during the internship, he could take the initiative to learn new computer technologies and knowledge, and cooperated well with team members, demonstrating strong learning ability and teamwork spirit. Through the internship, Mr. LUO Xiaoyu has gained a deeper understanding and mastery of computer-related knowledge, and acquired certain practical operation skills and problem-solving abilities.
