AI NEWS PRESENTATION

STUDENT ASSIGNMENT GUIDELINES

1. GENERAL REQUIREMENTS

Item	Requirement
Assessment	Individual assignment; 10% of the overall course grade
Submission format	.zip (required for all students). Include one PowerPoint file (.ppt or .pptx), maximum 3 slides, and the optional recorded video if included.
Presentation format	Online submission only; no live or in-class presentation
Optional submission	An optional recorded presentation of up to 3 minutes, included in the same .zip archive.
Due date	15 November in the assignment brief; final date requires confirmation

1.1 Purpose and learning outcomes

Examine one current AI news story through an ethical lens. Your presentation should move beyond reporting what happened: explain the ethical problem, assess its consequences and defend a practical response. The assignment addresses CILO-2 (develop your own perspective on ethical questions), CILO-3 (critically analyse AI's impacts and societal challenges) and CILO-4 (apply course knowledge to real-world issues and propose solutions).

1.2 Assignment task

Select one recent, credible news article about an actual AI-related event, development, policy decision or controversy. Prepare a self-contained presentation that answers three questions: **What happened? What is the central ethical issue? What is your justified perspective and recommendation?** Focus on ethical reasoning rather than a lengthy technical explanation or a simple news summary.

1.3 News selection requirements

The article must have been published within the three months before the confirmed submission deadline and must raise a meaningful ethical concern. Choose reporting from a credible source with identifiable publication details and evidence for its claims. A general opinion piece, advertisement or speculative prediction does not, by itself, establish an actual news event.

Include the article title, publication date, source and working link in your slides. Check that the reported event genuinely involves AI. Distinguish established facts from allegations, forecasts and your own interpretation. Supporting sources may clarify the context, but keep one news story as the focus.

1.4 Optional recorded presentation

The voluntary presentation refers only to an optional recorded video of up to three minutes summarising your news story, ethical analysis and recommendation. There is no live or in-class presentation and no scheduled presentation slot. On Slide 1, state your full name, student ID and whether you have included a recorded video (Yes/No). The video is supplementary and is not required for full marks.

2. PRESENTATION CONTENT AND FORMAT

The structure below is recommended. You may organise the content differently if all required elements remain clear within the three-slide limit.

01 NEWS + EVIDENCE	02 ETHICAL ANALYSIS	03 POSITION + RESPONSE

2.1 Slide 1: News overview

Briefly explain the event, when and where it occurred, the AI system or application involved, and the key stakeholders. Provide only the background needed to understand the ethical issue. Explain why the story matters rather than reproducing the article. Include the article's title, date, source and link, together with your full name, student ID and whether a recorded video is included (Yes/No).

A strong overview lets a reader unfamiliar with the story understand the relevant facts. If a claim is disputed or the evidence is incomplete, make that uncertainty visible.

2.2 Slide 2: Ethical analysis

Identify one central ethical concern and explain why it is an ethical problem. Apply relevant course concepts rather than merely naming them. Depending on the story, these may include privacy and data protection, fairness and bias, transparency, accountability, automation, or safety and security.

Explain who may benefit, who may be harmed, and how the AI system or its use creates these effects. Consider contrasting stakeholder perspectives and any tension between competing values, such as efficiency and fairness or security and privacy. A small stakeholder map or impact diagram can make this reasoning easier to follow.

A useful analytical sequence is: identify a reported practice, connect it to an ethical principle, and explain its consequences for affected people. Keep your analysis grounded in the article and relevant course material.

2.3 Slide 3: Critical perspective and recommendation

State your own position and justify it with evidence and ethical reasoning. Consider a plausible alternative view or counterargument before explaining why your position is preferable. Propose a specific response and identify who should implement it. Explain how the response addresses the central concern and acknowledge a likely limitation, cost or trade-off.

Avoid recommendations such as "make AI more ethical" without explaining the action required. A convincing recommendation is connected to the facts of the case, realistic for the responsible stakeholder, and clear about what it can and cannot achieve.

2.4 Slide design and communication

Use informative headings, concise wording and readable text. Include visuals only when they clarify the news, stakeholder impacts or recommendation, and acknowledge their sources. The PowerPoint must communicate your argument without relying on an optional video. Any title, reference or appendix slide counts towards the three-slide maximum; integrate references and credits within that limit.

3. ASSESSMENT RUBRIC

The required PowerPoint is assessed out of **10 points**, corresponding to **10% of the overall course grade**. The optional video is supplementary: it is not required to receive full marks. Ethical understanding and critical analysis account for 6 of the 10 points.

Criterion	Strong	Proficient	Developing	Insufficient
News relevance and accuracy (2 points)	**2:** Recent, credible AI news meets the selection requirements. Summary is accurate and focused; article details and link are complete.	**1.5:** Suitable news and mostly accurate summary. Minor omissions in context or source details.	**1:** Relevance or credibility is weakly established; important context or citation details are missing, or factual errors occur.	**0:** No suitable news is identified, or the summary is substantially inaccurate or unsupported.
Identification and understanding of ethical issues (3 points)	**3:** Clearly explains a central ethical concern and accurately applies course concepts to show why it matters in this case.	**2:** Identifies a relevant concern and makes a sound course connection, but explanation or application lacks depth.	**1:** Names an ethical concern, but explanation is superficial or course concepts are weakly connected or misapplied.	**0:** No meaningful ethical concern is explained, or the analysis fundamentally misunderstands the issue.
Critical analysis and personal perspective (3 points)	**3:** Weighs contrasting stakeholder impacts and a competing view; defends an independent position and a specific, justified response with a recognised limitation.	**2:** Gives a reasoned position and relevant recommendation; considers stakeholder impacts, but trade-offs, alternatives or feasibility need development.	**1:** Mainly describes the news or asserts an opinion; stakeholder analysis is limited and the recommendation is generic or weakly justified.	**0:** No reasoned position, meaningful stakeholder analysis or relevant recommendation is provided.
PPT clarity and organisation (2 points)	**2:** Logical, self-contained and readable presentation. Visuals and citations support communication; all content fits within 3 slides.	**1.5:** Clear overall and within the slide limit, with minor weaknesses in flow, readability or presentation of references.	**1:** Understandable only with effort because of dense text, weak organisation, unclear visuals or incomplete compliance with the format.	**0:** Very difficult to follow, or substantial format problems prevent effective communication.

3.1 Interpretation and award of marks

The scores shown are performance anchors. Marks between anchors may be awarded when work falls between descriptions. Each criterion is judged on the evidence in the submitted PowerPoint, up to its stated maximum; the four criterion scores are added to give the mark out of 10.

A high-scoring submission makes an evidence-based ethical argument, not just an attractive news summary. An optional video cannot replace content missing from the slides. Academic integrity matters are handled under the course and university policies.

4. ACADEMIC INTEGRITY AND SUBMISSION

4.1 Independent work and the course AI policy

Complete this assignment individually. The syllabus requires adherence to HKUST's Academic Honor Code and academic integrity policy. Write your own summary, ethical analysis and recommendation. Acknowledge borrowed ideas, quotations, facts and visuals; make direct quotations identifiable and use a consistent citation format.

Generative AI must not directly produce any content of your assignment. The syllabus states that such use will be treated as plagiarism. It permits collaborative support, such as assistance in searching for information, but every interaction with these tools must be credited in the assignment. Verify any source suggested by an AI tool against the original publication. Disclosing AI use does not make prohibited content generation acceptable.

If you use permitted AI assistance, include a concise credit explaining the tool used, the purpose and the nature of the interaction. Keep this credit within the three-slide limit. Consult the instructor if you are unsure whether a proposed use complies with the course policy.

4.2 Pre-submission checklist

Check	What to confirm before uploading
News eligibility	One actual AI news story; credible source; article published within the three months before the confirmed deadline.
Accurate evidence	The overview is accurate, uncertainties are identified, and the article title, date, source and link are included.
Ethical reasoning	One central concern is explained through relevant course concepts and its effects on different stakeholders.
Independent judgement	Your position is justified; the recommendation identifies an action and responsible actor, with a limitation or trade-off.
Format and readability	One .zip archive containing the required PowerPoint (.ppt or .pptx), no more than 3 slides in total, and the optional video if included. Slide text and visuals are legible.
Attribution and AI policy	Sources and visuals are credited; permitted AI interactions are acknowledged; no assignment content is directly generated by AI.
Upload readiness	Slide 1 shows your full name, student ID and "Recorded video included: Yes/No". The .zip archive extracts successfully and the PowerPoint opens and links work. If included, the video plays correctly and lasts no more than 3 minutes. Confirm the deadline and upload location.
